4. North Lily continued to screen and transport undersized material from dumps in the area. As in the past the oversize rejected material was graded, cross ripped, and contour to conform with the existing topography. The dumps and volume of material removed are listed below:

If there are areas where the seeding, fertilizing, and mulching were not successful on dumps reclaimed in the fall of 1992 a reseeding program will be initiated to complete the reclamation required. Upon successfully neutralizing the material on the heaps leach pads a program will be initiated to reclaim the plant, and heap leach area. This may are may not happen in 1993.
